

## JerelH Participates in OTC 2017 with Competitive Solutions

Houston/May 2, 2017/At the world's largest and most professional oil and gas exhibition–Offshore Technology Conference (OTC), JerelH Group, one of the representative companies in China's energy industry, combined the North American market demand and demonstrated different solutions for fracturing, petroleum equipment accessories, natural gas compressors and natural gas modules.

In the past few years, the US shale gas revolution prompted the rapid development of its oil and gas industry, and drove the market growth of hydraulic fracturing services. With the increase of oil prices in 2017, the US fracturing market demand will gradually expand. For JerelH, it established American JerelH Corporation in Houston as early as 2008 and in 2011 provided a full set of fracturing equipment to the market, being the only Chinese manufacturer that can provide such equipment to the United States so far.

## The Full Set of Fracturing Equipment Work in a US Shale Gas Well Site

At OTC 2017, Jereh's fracturing solution can achieve the life cycle management of operations, which reduces the preparation time, safety risks and resource consumption with higher power output and operational capacity to meet the requirements of large-scale operations.

For the need of accessories, Jereh sets up service base in Houston, USA and Calgary, Canada to provide customers with equipment repair, maintenance, rebuilding and technical training services.

"We are optimistic about the North American market as well as the industry development. And we will continue the investment to improve the technology and equipment capabilities

to help customers address the challenges of efficient oil and gas development," said Mr. Liu Xinxu, Head of Jereh North American Region.
