

Jereh Showcases Solutions for the Transformation of Gas in Australia

Perth/April 12, 2016/ Jereh, a leading oil and gas company, attended LNG 18, the world's largest global LNG event, in Perth, Australia on April 12-15, and showed a series of gas monetization solutions to support the growth of gas industry, especially under the global context of lower energy prices and sluggish economic growth.

This year, the booth highlights the full value chain from gas production, liquefaction, gas-to-liquids to gas transportation and fueling. It covers equipment manufacturing, small-scale LNG/GTL technologies as well as engineering services. The Playwell Micro LNG solution launched last June in Paris, World Gas Conference, is updated to reduce the project cycle by 60%, bringing higher utilization rate of coal bed methane, pipeline gas, shale gas and biogas. Besides, the small-scale GTL solution offers another option to meet the increased demand for gas monetization and make better use of oilfield associated gas, stranded gas at well sites and syngas from an underutilized reformer or gasifier. The advanced, robust Jereh-Primus GTL solution features the longest catalyst lifetime, flexible feed gas requirements, cost effective gas flows and quick delivery service.

At Jereh, we have been committed on the evolving technological, commercial, social and environmental challenges affecting the LNG industry. "In the longer term, we are positive to the future of LNG. Taking customer demand into consideration, we are trying to find out methods to optimize procurement costs and maximize flexibility. Through 10 years of dedication in the energy industry, Jereh products and services have good track record in over 60 countries to maximize the potential of every operation." said Mr. Li Weibin, Senior Vice President of Jereh Group.

In addition, Jereh as the representative of Chinese LNG enterprise, sponsored the LNG 19 party on April 14, and expressed warm welcome of more big international cooperation and technological innovation at LNG 19 in Shanghai, 2019. It is expected Asia will be the major LNG importer in the near future, of which China market will contribute more. Jereh will take advantage of its industry experience to support more efficient energy utilization.
